

Danish Medicine Verification Organisation

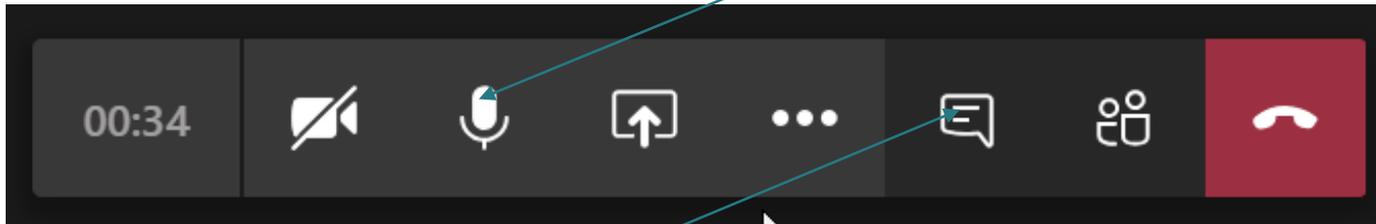

Virtual Meeting 22.10.2020

SSR Release 7.1

THE HOUSE RULES of DMVO during virtual meeting

- All participants are on mute by default to reduce noise
- Unmute yourself by clicking on the microphone icon

- Feel free to ask questions during the meeting
- Chat comments are always welcome
- The meeting will be recorded and made available for download and later review

Danish Medicines Verification Organisation

Agenda of today

- Reasons for new release 7.1
- Release phases
- Stakeholders
- What's new
- Release plan

Reasons for new release 7.1

Alignment around:

- FMD
- URS
- Function definition
- Three systems

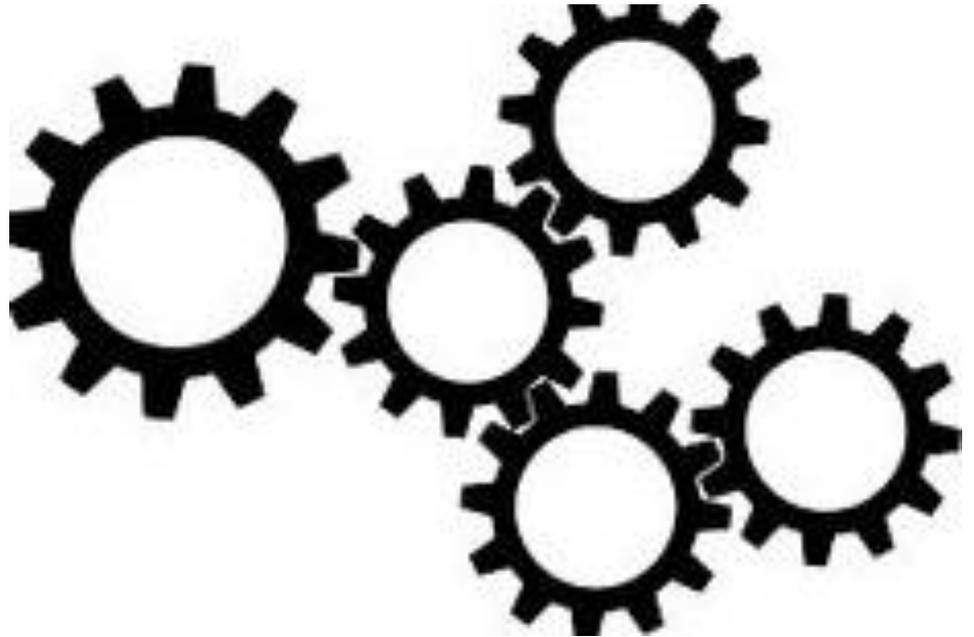

Release phases

- SSR: Development + Testing complete
- SSR: IT Acceptance Tests (ITAT)
- SSR / NMOVs: UAT
- EMVO and NMVOs: Interoperability Tests (IOT)
- SSR: Deployment to PRD

New release 7.1 DMVS

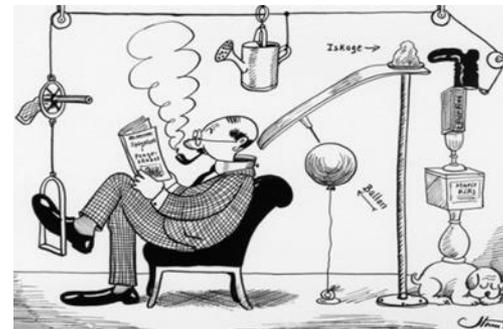

Involved stakeholders:

- Local Organisation (End Users)
- DMVO
- NCA
- OBP

What's new in 7.1

- Removed support for old URLs
- Mark the Frontend API 1.5 as deprecated
- Expiry Date Data Elements Check
- IMT Initiating National System will raise alert for pack state changes and verification
- Distinguish Location in Operation Codes
- Double Dispense Time Limits
- PPSU Status Determination
- Direct Download Links for reports
- Organisation Search
- Client (location) Search

Changes

- Removed support for old URLs (NMVOs, Local Organisations, NCAs)
 - DMVS Portal <https://portal-dk.nmvo.eu/>

- Mark the Frontend API 1.5 as deprecated (Local Organisations, NCAs)
 - This does not prevent the use of API 1.5 but formally notifies the user that it will be retired in the future. API responses will include the http header API-deprecated-versions 1.5. Current version is 2.1 OC the reason for changes ETC.

Changes continued

- Expiry Date Data Elements Check (Local Organisations, EMVO, OBPs, NMVOs)
 - The date will be ignored when comparing the scanned or manually entered date with the stored date. (e.g. 200200 \equiv 200228).
- IMT Initiating National System will raise alert for pack state changes and verification (NMVOs)
 - With this change both markets will raise the alert using the same UPRC. The fulfilling market will inform the European Hub, fulfilling market's NMVO and the initiating market will inform their local NMVO.

Unique Alert ID (UPRC) : DK-KYZ-0JP-3EV-UBU-31B

Changes continued

- Distinguish Location in Operation Codes (NMVOs, Local Organisations)
 - The NMVOs would like to be able to distinguish between a local failed decommission and a failed decommission from another location.
- Double Dispense Time Limits (Local Organisations, NMVOs, OBPs)
 - Double Dispense Time Limits (Local Organisations, NMVOs, OBPs) A configurable time limit is introduced where any re-dispense later than the limit will raise an alert.

- Direct Download Links for reports (NMVOs, NCAs)
 - Users were not able to download large reports over 5GB via the user portal. A direct download of reports from storage will resolve this limitation on the portal.

- PPSU Status Determination (OBPs)
 - The EMVS will no longer allow an OBP to update the pack status if the product is withdrawn in all markets or if the batch is recalled in all markets. The European Hub will return an appropriate message back to the OBP.

Changes continued
